Process Tabular Project Model

In SSDT (Sql Server Data Tool)
Northwind Database

3 דרכים לבצע Process:

א) דרך SSAS

- Process All
  - Model(ut) --> Process → Process All
- Process Partitions
  - Model(ut) --> Process → Process Partitions → Mode="Process Full" →

    Checkbox necessary Partitions

ב) באמצעות ה SSMS

- Process Database
  - Right click DB--> Process Database → Mode="Process Full" → OK

ג) ע"י SSIS Package

- Create "Analysis Service Processing Task"
- Add new "Analysis Services Connection Manager"
  - Server File Name = Your Analysis Instance name
  - Log on to server = "Use windows NT Integrated Security"
  - Initial catalog = Choose the right DB
- Add Analysis Services Object
  You can choose:
  - ✓ Tabular Model
  - ✓ Specific Tables
  - ✓ Specific Partition (in our example we can choose only partiton "Sales 1998" - and it will work)
- ** Mode="Process Full"

You need to Decide based on your business needs!
Remember you can create number of Processing tasks in Different times of the day
